## **Myerson, LLC Expands CAD/CAM Offerings with Dentivera® Milling Disc**

**CHICAGO, IL, December 18, 2020 – Myerson, LLC** announced they are acquiring assets related to the Dentivera™ milling disc from Solvay® Specialty Polymers USA, LLC. Solvay has also granted Myerson an exclusive license for the dental industry to use the Ultaire® AKP trademark.

“Advancing Dentistry for over 100 Years, Myerson works to provide quality products and exceptional service to enhance smiles globally. Adding the Dentivera™ milling disc to the Myerson family of products gives us the opportunity to broaden the solutions we provide for patients needing partial dentures and other removable dental appliances,” says Jim Swartout, Myerson’s President and CEO.

Dentivera™ is the only milling disc made from Ultaire® AKP. Dentivera is a clinically proven product and was specifically designed to meet the critical performance requirements for removable partial denture frames.

Ultaire® AKP is an innovative aryl ketone polymer that was purposefully engineered to provide a biocompatible, lightweight and non-irritating alternative to metal. It was formulated to be rigid and supportive, yet have enough flexibility to protect the abutment teeth and preserve gum tissue. Ultaire® AKP frames are digitally designed for an accurate fit and hold their shape so they require fewer adjustments, saving dentists and patients time and money.

Myerson is a globally recognized dental manufacturing company. They are specialists in the removable prosthetics market, offering materials and equipment for fabricating complete dentures, metal free partial dentures, and sleep appliances. Their most popular products are Myerson® and Kenson® brand denture teeth, DuraFlex™, Visiclear®, and DuraCetal® materials for removable partial dentures, as well as EMA® for the treatment of snoring and obstructive sleep apnea. Myerson is headquartered in Chicago, Illinois, and their factory is in the Caribbean country of Trinidad and Tobago, where they have been manufacturing medical devices for over 70 years.
